

ClipPilot Lite — Talk Script

GRAD 5900 Capstone | Bharani Rajendran | 2 minutes

SLIDE 1 — What Is ClipPilot Lite?

Timing: ~45 seconds

ClipPilot Lite takes a single text prompt and turns it into a polished short video — **fully automated, no editing needed**.

Walk through the six pages:

- **Landing page** — introduces the product.
- **Auth** — sign up / sign in with Supabase (email + password).
- **Create page** — enter a topic, pick a style (storytelling, documentary, educational, explainer, animated), set duration (30 / 60 / 90 s), toggle narration, captions, and background music on or off. You can even upload your own MP3.
- **Status page** — real-time progress bar walks through every pipeline step.
- **Result page** — custom video player with seek bar, download button, and a shareable public link.
- **Dashboard** — shows all your past videos at a glance.

Tip: keep this brisk — you're painting the user experience, not reading a feature list.

SLIDE 2 — The Agentic Pipeline

Timing: ~1 min 15 seconds

Behind the scenes, **five Claude AI agents** run in sequence — each one a specialist with a single job:

- **Research Agent** — gathers key facts, statistics, and narrative angles on the topic.
- **Script Agent** — writes a timed narration with scene-by-scene visual descriptions.
- **Review Agent** — quality-checks the script and can send it back for up to two revisions (a self-correcting loop).
- **Shot List Agent** — converts each scene into an optimized prompt for the video-generation model.
- **Metadata Agent** — generates a title, description, and tags for the finished video.

Then mention **beats**: each beat is one narration segment paired with one visual scene — the atomic unit of the video. The pipeline processes beats in parallel where possible.

After the agents finish, three external services take over:

- **Google Veo 2** — generates the video clips.
- **ElevenLabs** — produces the voice narration.
- **Deepgram** — transcribes the audio for timed captions.

Finally, **FFmpeg** stitches everything together — video, audio, captions, background music, and a mandatory disclaimer — into one vertical (9:16) MP4.

Guardrails (mention briefly):

- **Input moderation** — Claude checks every prompt before it enters the pipeline.
- **Output moderation** — the finished script is re-checked for 12+ compliance.
- **Fail-closed design** — if any safety check is uncertain, the job is rejected rather than allowed through.

CLOSE — Live Demo

Timing: ~15 seconds

"Let me show you a video it generated — this is from the prompt '**how bees make honey.**'"

Play the video. Let it speak for itself.

5 AI Agents · 46 Tests Passing · <5 min Generation · \$0.72/video · 9:16 Vertical
